

THARINDU BANDARA

UNDERGRADUATE STUDENT

 jananjayabandara2003@gmail.com  071-959-0484  Kurunegala

SUMMARY

I am an undergraduate pursuing a BSc in Computer Science with Artificial Intelligence from Coventry University, UK, with a strong interest in AI automation, software development, and robotics. I have hands-on experience in developing real-world projects, including AI-driven applications, web platforms, and embedded systems, with skills in Python, Java, and modern web technologies. I have a solid foundation in machine learning, data processing, and system design, along with strong problem-solving abilities. I am seeking an internship opportunity to apply my skills, contribute to innovative projects, and gain valuable industry experience.

KEY COMPETENCIES

- Programming & Software Development .
 - Artificial Intelligence & Machine Learning
 - Web Application Development
 - Embedded Systems & IoT Development
 - Database Management & SQL
 - Problem Solving & Analytical Thinking
-

PROJECTS

Tech Solutions service Website + Portfolio

www.yakafinity.com

December 2025- Present

- Developed a production-ready AI-powered business website with responsive UI/UX and modern web architecture.
- Integrated an AI assistant, secure enquiry management, email notifications, and WhatsApp communication features.
- Built a protected admin dashboard with authentication and lead management using a PostgreSQL database.
- Technologies: Next.js, React, TypeScript, Tailwind CSS, PostgreSQL, Prisma, Google Gemini AI, Supabase, Vercel, Git.

Car Price Prediction System

January 2026

AUTOVALUE SL

- Developed a machine learning-based car price prediction system for the Sri Lankan vehicle market using real-world data
- Performed data preprocessing, feature engineering, and model training to generate accurate price predictions
- Tools & Technologies: Python, Pandas, Scikit-learn, Machine Learning

- Developed a phishing AI application utilizing a dedicated CSV phishing dataset.
- Performed application development using Python to process the dataset and execute the system's artificial intelligence logic.
- Tools & Technologies: Python, Artificial Intelligence, CSV Data Processing.

Vehicle Tax Calculation System

February 2026

- Developed a vehicle tax calculation system using real VIN numbers for UK-based vehicles to estimate import duties and taxes
- Implemented VIN-based data processing, tax logic, and user input features to generate accurate cost calculations(Real World API connected)
- Tools & Technologies: Python, MySQL, Data Processing, System Design

Currency Note Recognition System

April 2026

- Developed a machine learning-based Sri Lankan currency note recognition system to identify Rs. 20, 50, 100, 500, 1000, and 5000 notes from images.
- Implemented image preprocessing, feature extraction, edge/contour detection, and model training to classify currency note denominations with 92.86% testing accuracy.
- Tools & Technologies: Python, OpenCV, Scikit-learn, Random Forest, NumPy, Matplotlib, Joblib.

EDUCATION

Bsc.Computer Science with AI,Coventry(UK),NIBM	2024 – Present
• Specialisation in AI	
Diploma in English,ESOFT	2025

SOFT SKILLS

• Problem Solving • Critical Thinking • Team Collaboration	• Communication Skills • Time Management • Adaptability
--	---

CERTIFICATIONS

• AI for Beginners HP Life • Introduction to Cybersecurity Awareness HP Life • IT Essentials Alison • Introduction to Cybersecurity Cisco
